Research Statement

I am broadly interested in **Trustworthy Reinforcement Learning**, particularly in designing interpretable, robust, and verifiable policies for safety-critical domains. My current work focuses on **Neurosymbolic** approaches such as programmatic policies, combining explicit knowledge with learning to bridge System 1 (neural) and System 2 (symbolic) reasoning.

Research Areas and Skills

Reinforcement Learning	Hierarchical and goal-conditioned RL, sample-efficient learning in sparse-reward and long-horizon tasks, robust and distributional RL, RL fine-tuning of foundation models
Neurosymbolic AI	Programmatic and interpretable policies (differentiable decision trees), symbolic planning with incremental knowledge, interpretable state abstractions and world models
Safety & Verification	Formal verification of learned controllers, reach-avoid and safety certificates, abstraction-based reasoning for safety-critical systems
Applications	Cyber-physical systems, microgrid energy management, autonomous navigation and robotics, LLM-based planning for embodied agents
Programming	Python, C, PyTorch, TensorFlow, ROS 2, MATLAB, LaTeX
Coursework	Mathematical Statistics, Deep Learning, Machine Learning, Computer Vision

Education

2023 – 2027 (expected) — **Ph.D., Computer Science** — Singapore
Nanyang Technological University (NTU)
Thesis: *Neurosymbolic Techniques for Safe and Efficient Reinforcement Learning*
Advisors: Arvind Easwaran (NTU), Blaise Genest (IPAL, CNRS France & Singapore)

2019 – 2021 — **M.Tech., Computer Science** — Kolkata, India
Indian Statistical Institute (ISI)
Thesis: *Strategies for User Allocation and Service Placement in Multi-Access Edge Computing*
Advisor: Ansuman Banerjee CPI: 82.1%

2012 – 2016 — **B.Tech., Electronics and Instrumentation** — Silchar, India
National Institute of Technology (NIT) Silchar
Thesis: *Real-Time Position Control of DC Motor using PID and Fuzzy Logic*
Advisor: Munmun Khanra CPI: 7.92/10

Research Experience

2022 – 2023 — **Research Associate** — Singapore
CNRS@CREATE
- Designed a granular control system for microgrids using Deep Reinforcement Learning.

2021 – 2022 — **Machine Learning Engineer** — Pune, India
InFocusp Innovation Pvt. Ltd., under attachment to Google X (USA)
- Developed solutions for the Abstraction and Reasoning Challenge (ARC) using Reinforcement Learning.

2021 — **Research Engineer** — Hyderabad, India
TiHAN, IIT Hyderabad
- Developed braking and throttle control systems using Arduino for a test vehicle.
- Deployed a lane detection model on the NVIDIA AGX board.

Open-Source Software and Educational Content

Research Code

DTSemNet Differentiable oblique decision trees and tree policies for RL (JMLR 2026, ECAI 2024).

InK-BWTS Neurosymbolic hierarchical RL with Belief World Tree Search (ECML-PKDD 2026).

F1Tenth ROS 2 race stack (SLAM, particle-filter localisation, Pure Pursuit, etc.) on Jetson AGX.

Educational Content (ongoing effort)

Deep RL Jutsu Notebook-style tutorials implementing deep RL algorithms from scratch (DQN, DDPG, SAC, PPO), with a curated guide to RL libraries and resources.

GenAI Small-scale implementations of generative models (VAE, GAN, diffusion, state-space models, CLIP, VLA) on toy problems to explain how they work.

RLFT Tutorial series on RL fine-tuning of foundation models: RLHF, DPO and GRPO, from a from-scratch GPT to a pretrained LLM.

Awards and Scholarships

2023 – 2027 **DesCartes Scholarship**: Ph.D. scholarship awarded by CNRS@CREATE under the DesCartes project (research collaboration between Singapore and France).

2021 **M.Tech Best Thesis Nomination**: ranked among the top 5 theses of the batch.

2019 – 2021 **M.Tech Scholarship**: scholarship awarded to pursue a master's degree.

2006 – 2012 **Jawahar Navodaya Vidyalaya (JNV) Scholarship**: fully funded residential education from Class 6 to 12.

Academic Services

Teaching and Mentoring

Final Year Projects **Undergraduate Final Year Projects** NTU

Project supervision

SafeDAG: Precedence-Constrained LLM Steering for Safer Planning in Embodied Agents (ongoing); programmatic policies for interpretable RL using pre-trained models / LLMs; robustness vs. explainability trade-offs in CNNs.

URECA **Undergraduate Research Experience on Campus** NTU

Research mentoring

Mechanistic interpretability of Decision Transformers; ARC reasoning with LLMs; physics-inspired model-based RL; residual reinforcement learning.

F1Tenth **F1Tenth Autonomous Racing Team** NTU

Mentor

Built the ROS 2 race stack on Jetson AGX and advised students on control and navigation strategies.

Reviewing

Reviewer CAV, AAAI, ECAI, IEEE TSMC, RTSS, NeurIPS, AAMAS, NeSy.

Leadership

Vice President **CCDS Student Club**, NTU: organized events such as the Deep Learning Bootcamp and AI Meetup.
